ALT-INK ACADEMY • SHEET 10: MEDIEVAL HERALDRY & ARMORIAL CRESTS

Hardware: Poseidon Pen 3.5mm • 1205RL Linework & Hatching • 1207RM Solid Black & Shading

50 mm THERMAL SCALE BAR (1:1)

MASTER HERALDIC CREST (HELMET + MANTLING + BLAZON)

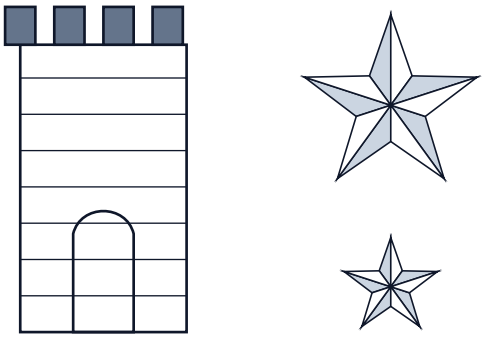

1. Fleur-de-lis (Flor de Lis) • 1205RL @ 7.2V

Practice symmetrical curves, crisp spear points & waist loops.

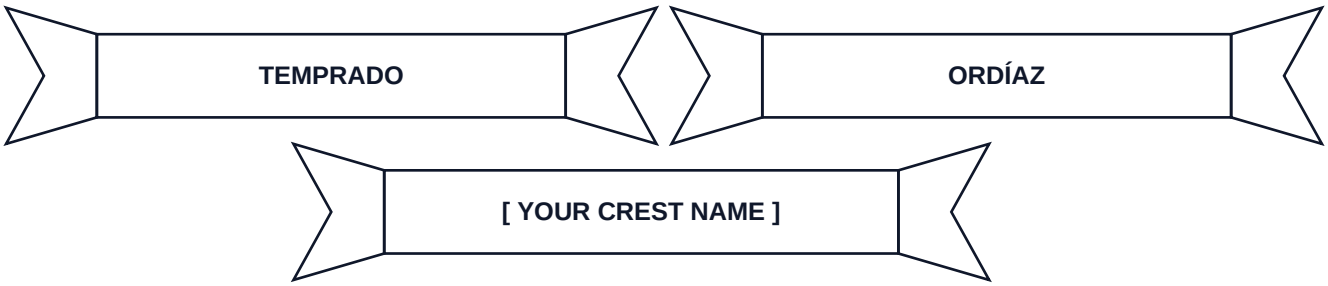

2. Medieval Fortress Tower & Faceted Stars

Ashlar stone texture (micro-hatching) & 5-point star bevels.

3. KNIGHT VISOR HELMETS, FEATHER CRESTS & PARCHMENT BANNERS (FILACTERIAS)

Visor eye-slits (celada de caballero), ornamental feather plumes, and flowing ribbon folds for family names.

4. Armor Metal Shading & Curvature Gradient (1207RM Whip at 45° vs 1205RL Hatching at 70°)

1. Convex Visor Highlight

White reflection in center

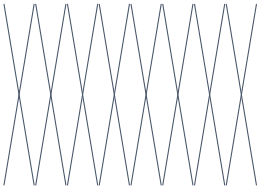

Feather out with 1207RM

2. Steel Plate Shadow

Deep shadow at rim (6.0V)

Drop ink to 0 at highlight

3. Cross-Hatch 60°

4. Rivets & Sills

ALT-INK ACADEMY • SHEET 10: MEDIEVAL HERALDRY & ARMORIAL CRESTS

Technical Execution Guide & Poseidon Pen Machine Settings

50 mm THERMAL SCALE BAR (1:1)

MOTIF / ELEMENT	CARTRIDGE	VOLTAGE	ANGLE	HANG	BIOMECHANICAL RULE
Outer Crest Contour	1205RL	7.2 V	75°	1.5 mm	Slow drag (~1 cm/s), lock wrist, glide with pinky.
Acanthus Lambrequins	1205RL	7.4 V	75° → 85°	1.8 mm	Tapered whip flick at the feather tip.
Faceted Star Bevels	1205RL	7.0 V	70°	1.5 mm	Razor-straight lines with breath holding.
Metal Visor Shading	1207RM	5.8 - 6.0 V	45°	1.8 mm	Pendulum whip from deep rim towards highlight.
Solid Shield Packing	1207RM	6.2 V	80° - 85°	1.8 mm	Tight concentric circles at constant hand speed.
Ribbon Lettering	1205RL	7.0 V	75°	1.5 mm	Rotate synthetic skin for each letter curve.

1. Symmetrical Balance & Center Axis:

Heraldic blazons rely on perfect visual balance. Always draw a faint vertical centerline on your stencil. Tattoo the central elements first (helmet, shield axis, ribbon center) before moving to the mirroring mantling wings.

2. The Metallic Armor Illusion (Leaving Pure Skin):

Metal looks like metal because of sharp contrast: deep shadows immediately next to pure white highlights. Do NOT shade the entire visor. Leave a clean stripe of un-inked skin for the sun reflection.

3. Ashlar Stone Texture (Micro-Hatching):

For fortress towers and stone sills, avoid smooth greywash. Use the 1205RL at 6.8V like a Renaissance copperplate burin. Keep parallel stroke intervals at 0.5 mm to create authentic medieval engraving texture.

4. Banner Ribbon Perspective & Folds:

Tattoo the foreground ribbon loop first, clean with Dab & Lift, then tattoo the backward folds. Ensure the fold triangles receive dark shading with 1207RM to push the background back in 3D.
